EXPERIENCE

Programmer/Analyst

December 1996 to present

DATA ACCESS/DATAPATCH • PARAMUS, NJ

Analyze, program, test, and debug computer systems to improve the productivity of business management information for this company that manufactures networking cables, installs networks, and refurbishes computers.

Accomplishments:

- Built an OLTP system that provides the facility of data entry from multiple locations.
- Provided a user friendly Windows interface in the system that permitted the use of standard available applications.
- Solely responsible for creating a business reporting system that incorporated all data from prior computer assemblages and that provided weekly management-level information. The design included a comprehensive database as well as a historical load. Flexible design facilities in the system permits easy alterations in formatting, content, and expansion. Received numerous commendations from users for its readability, user-friendly format, pleasing style, and genuine usefulness.
